DESCRIPTION

AQUAVELOX™ creates a sealing water repellent coating on the windscreen and all glass surfaces, quickly rejecting water and contaminants and actively contributing to road safety.

Thanks to AQUAVELOX™ the glass surface will remain smooth and protected from water and dirt for a long time, with unusual speed and ease of application for this type of products. With just one application of AQUAVELOX™, the windscreen will remain clean much longer and insects and contaminants will be removed quickly and easily.

The product resists to repeated car washes, to insect cleaning liquids and windscreen liquids with high alcohol content. AQUAVELOX™ has been thoroughly researched, developed and tested in #Labocosmetica® laboratories in cooperation with the most prestigious sports car manufacturers worldwide for the launch of new models.

INSTRUCTIONS FOR USE

Clean and decontaminate the glass from limescale using our ÈNERGO with the aid of a clay bar and, in the most severe cases, using a polish for windows. In the event of windscreens soiled with carwash wax residues, use VÉRITAS.

Spray AQUAVELOX evenly on the perfectly dry glass and spread it with horizontal and vertical movements using a clean and dry microsuede cloth, until the whole surface is covered. Complete the treatment using a dry microfiber cloth.

The second layer, applied 20 minutes after the first, further enhances its effect. The product activates completely 8 hours from application.
